Life On Land

15.3 Supporting land ecosystems through action

SDG 15 – Indicator 15.3.3 Local biodiversity included in planning and development

KSE UNSRI Ikut Bagian dalam Kegiatan Gerakan Penanaman 4000 Pohon Serentak di 40 Titik Se-Indonesia

Karya Salemba Empat (KSE) at Sriwijaya University (Unsri) participated in the nationwide "4000 Trees Planting Movement," which took place at 40 locations across Indonesia. Unsri's KSE chapter selected Sungsang IV Village, Banyuasin, as their site, where volunteers planted trees on Sunday, September 15, 2024.

The project collaborated with the Center for International Forestry Research (CIFOR) to manage mangroves, according to Herni Ernasari, the event coordinator and a student at Unsri's Faculty of Mathematics and Natural Sciences. 150 mangrove seedlings were planted by volunteers, comprising 100 *Rhizophora Apiculata* propagules, 20 *Bruguiera Gymnorhiza*, and 30 *Rhizophora Apiculata* seedlings. 47 KSE Unsri scholarship winners, 65 volunteers from six South Sumatran colleges, and representatives of the local government and environmental organizations participated in the event. This program sought to increase students' understanding of environmental issues while giving them real-world experience in collaboration and negotiation. Involving KSE and associated organizations, the initiative sought to raise community awareness of environmental preservation and expand the number of trees in Indonesia. Over 4,000 tree seedlings, including mangrove, fruit, and ornamental trees, were planted nationwide from Aceh to Papua as part of this program.
