belumana in bakan. "Sedangkan penangkapan ikan tambakan di alam terus menga-lami pening katan sehingga sangat mengkhawatirkan teran cam kepu-nahan apalagi pada bu didaya ternahan apalagi pada budidaya ter kontro l juga belum dapat sepe

nuhnya mengurangi ketergantung terhadap hasil alam," katanya. Kegiatan bertujuan untuk meng aplikasikan penggunaan hormor gonadotropin dalam meningkatkar

gmaaon opu casan menngsark kualitas serta kuantitas benih ya dihasilkan melalui indukan ya unggul. Sehingga, nantinya me ciptakan masyarakat yang mand serta meningkatkan kemampu

Mandiri Abad menyambut bi kegiatan ini. "Kami di sini sanj terbantu dengan kegiatan penga dian masyarakat untuk peningl tan pengetahuan dan skili pi pembudidaya serta masyaraka ujarnya (nni/lia)

Various research outcomes from Universitas Sriwijaya are implemented within the broader community, especially in Fostered Villages. For example, in the agricultural sector, assistance is provided for implementing vegetable fertilization using Eco Enzyme with a balance of ingredients based on simple mathematical patterns in Pulau Semambu Village, Indralaya. In the fisheries sector, support is provided for the production of tambakan fish, a local fish species from South Sumatra that can be cultivated as a source of income for fish-farming communities.

Sriwijaya offers solutions Universitas communities with limited knowledge who rely on diverse individual skills without having proper references. technical guidelines as field Enhancing knowledge and providing technical training to the community has been proven to increase production and income, alleviating poverty and improving community welfare.
