

7.4 Energy and the community

SDG 7 – Indicator 7.4.2 100% Renewable energy pledge

PLN Goes to Campus: PLN Edukasi Mahasiswa Tentang Transisi Energi

125 engineering students and faculty members attended the sustainable energy awareness event, which gave them information about electrical systems and the transition to Net Zero Emissions by 2060. Vice Dean of General Affairs Dr. Bimo Brata Adhitya thanked PLN for the partnership and hoped it would lead to further possibilities for students to study in the field at PLN UP3 Ogan Ilir. In order to foster environmental consciousness and support for the energy transition, Eko Saputra Hayani, Assistant Planning Manager at PLN, underlined the critical role that young people have in developing the energy sector. Adhi Herlambang, general manager of PLN UID S2JB, reaffirmed PLN's dedication to workforce development and education, which are critical to Indonesia's energy future.

Students were also given the opportunity to speak with the speakers face-to-face, which inspired them and made them feel more accountable. Michael, one of the participants, talked about how the occasion inspired him to support Indonesia's energy objectives, particularly by providing clean, effective energy solutions. He claimed that this program encourages young people to actively support national development, which is in line with the spirit of Youth Pledge Day.
